

Meeting Our Students

Welcome back to Berkeley City College for another exciting fall semester! This fall semester, close to six thousand students will be attending classes at Berkeley City College in-person or online. Whether they are just beginning their journey at BCC or continuing to build on past achievements, remember that each day is a chance to teach, support, and inspire them to achieve their academic goals. Before you meet them in person, let's preview their demographics.

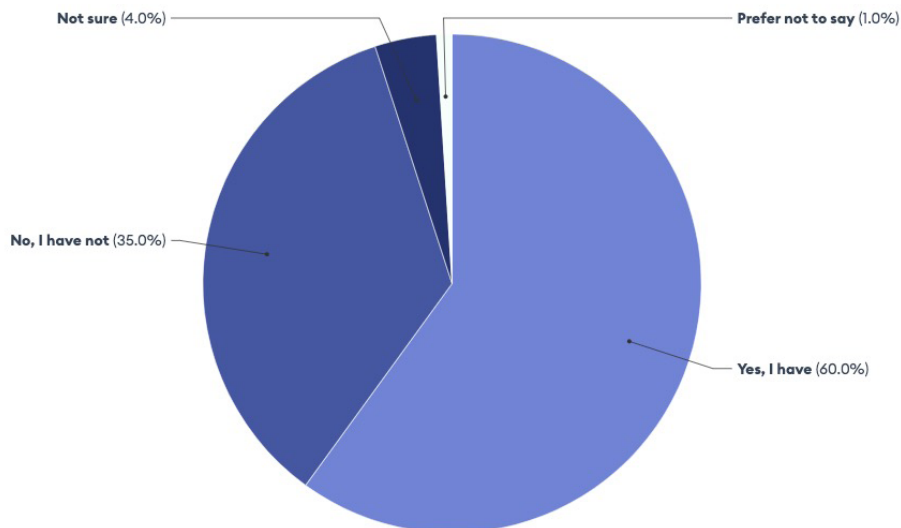

AI in the Classroom

Are you using AI in your classes? As large language model (LLM) interfaces such as ChatGPT, Gemini, and Bard are growing in popularity, discussions about innovations and debates have emerged across educational systems about their integration and impact on the experiences of teaching and learning. Some of the most common topics involving AI in the educational system include adaptive learning platforms, automated grading and feedback systems, ethics of AI use, academic cheating, data privacy, algorithmic biases, AI-powered educational games, chatbots for student support, and intelligent tutoring systems.

A recent Forbes poll of 500 educators ranging from elementary school to university were asked their

opinion of AI and how they integrate it in their teachings. Among the respondents, 60% of the educators reported that they are currently using AI in their classrooms. Other survey topics included ethics of AI, faculty concerns, cheating methods using AI, and more. Some of the main survey findings include 55% of respondents who had a favorable view of AI, and 60% said they use AI tools in their classrooms. The top 3 tools of choice were AI powered educational games, adaptive learning platforms, and automated grading and feedback systems. The top 3 drawbacks were fear of plagiarism in written works, fewer human to human connections, and data privacy and security. 30% said they feared job displacement for teachers.
